About Me

- I trained in civil engineering before being adopted into geography.
- My areas of interest include transportation, equity, justice, spatial analysis, spatial statistics, travel behavior, and cities.
- Also, too, mathematics, computer languages, science fiction, poetry, and history.
- My research has been funded by all three agencies in the Tri-Council: CIHR, NSERC, and SSHRC.
- As of May. 1, 2025, the total number of citations to my work is 13,057, my *h*-index is 59 and my *i*10-index is 136, meaning that 136 of my publications have been cited 10 times or more (source: Google Scholar).
- A 2024 global bibliometric analysis by Research.com of the most influential scholars in the social sciences and humanities (about 16,000 researchers) places me in the **top 3%** of scholars in the world.
- In 2024 I was recognized with the **Edward L. Ullman Award** of the Association of American Geographers for lifelong commitment and contributions to the field of transportation geography.
- In 2010 a research team I led was recognized with the **Meredith F. Burrill Award** of the Association of American Geographers for exceptional work at the intersection of policy and basic research in geography.

Research Impact

Fig. 3 gives a summary of my research impact according to Google Scholar. As of May, 2025, my research has been cited a total of 13,251 times, and my h-index is 59. The i10-index indicates that 136, or approximately 63% of my publications have been cited ten times or more.

The impact of my work can also be appreciated by the breadth of the fields in which it is cited. According to Web of Science (Fig. 4), my research is cited by scholars in numerous disciplines, notably in Transportation, Environmental Science/Studies, Geography, Economics, and Urban Studies. My publications have been cited by researchers in more than 100 countries; as seen in Fig. 6, most citations to my work are by researchers in the United States, China, Canada, England, and Spain.

Lastly, my work has contributed to inform research that aligns with the United Nations Sustainable Development Goals (see Fig. 5), particularly goals 11 Sustainable Cities And Communities, 03 Good Health And Well Being, 13 Climate Action, 15 Life On Land, and 16 Peace And Justice Strong Institutions.

Combined with the level of funding described above, the cost-effect of my research is approximately CAD 7,154 per peer-reviewed article (not counting book chapters, edited books, or books). To put this number in context, this is equivalent to 54% of a one-year graduate research assistantship at my institution. In terms of impact, the cost-effect of my research is CAD 86 per citation.

Policy Impact

In addition to the scholarly impact of my research, my work has helped to inform policy. According to an analysis of policy impact using data from Overton.io¹, I am in the top 1% of all researchers at McMaster in terms of citations in policy documents. When we consider active researchers in the social sciences, I rank second at McMaster in terms of citations in policy documents, after Prof. Magdalena Janus (Faculty of Health Sciences).

The impact of my research on policy is reflected in citations in multiple languages, including English, Estonian, French, Portuguese, and Spanish. The international reach of this impact can be appreciated in Fig. 7, which shows the source countries of documents that cite my work. These countries include Canada, US, Mexico, Brazil, several European countries, Australia, and New Zealand. Besides governments at various levels in said countries, numerous Inter-governmental Organizations (IGOs) also refer to my work in their policy documents, including the European Union, OECD, the World Health Organization, the Pan American Health Organization, the World Bank, the Inter-American Development Bank, the International Transport Forum, and the Global Commission on the Economy and Climate. Think tanks that cite my research in policy documents include IPEA (Brazil), the Lincoln Institute (US), MOTU (New Zealand), and DIW (Germany).

The distribution of citations in policy documents is more or less evenly distributed between governments and Inter-governmental Organizations, followed by think tanks, as seen in Fig. 8.

Analysis of policy documents that cite my research identifies the main topics where my work has been influential. In Fig. 9 we can see the wide range of topics, from the economy and transportation, to air pollution and food security. The topics that my research is found more than expected relate to cycling, bus and rapid transit, accessibility, and public transport.

Research Output

It is conventional in my fields of expertise to list authors in order of their contributions. The first and second authors are credited with doing a majority of the work. The exception to this general rule is when the last author is the senior author and has provided, in addition to other contributions, supervisory support to the rest of the team.
